Attack Surface Intelligence Module

Intelligence-Driven Attack Surface Reduction

Challenge

Proactive attack surface management is more important than ever before as organizations face an expanding threat landscape and unprecedented level of attacks. With digital assets scattered all over the Internet, often spun up without proper security oversight and hygiene, and left forgotten and unsecured, organizations must ensure that they have a full understanding of their external attack surface. You can't defend what you can't see.

Solution

With a unified view of its external infrastructure, organizations can better navigate across disparate technology systems and quickly map and resolve vulnerabilities while keeping pace with its dynamic attack surface.

Attack Surface Intelligence from Recorded Future shines a light on an organization's risks tied to their connected environments, and provides security and compliance teams with a comprehensive toolset to understand and mitigate risk across their associated attack surface. It provides an outside-in view of your organization, enabling organizations to see the blind spots that are visible to adversaries and move the advantage back to your own teams.

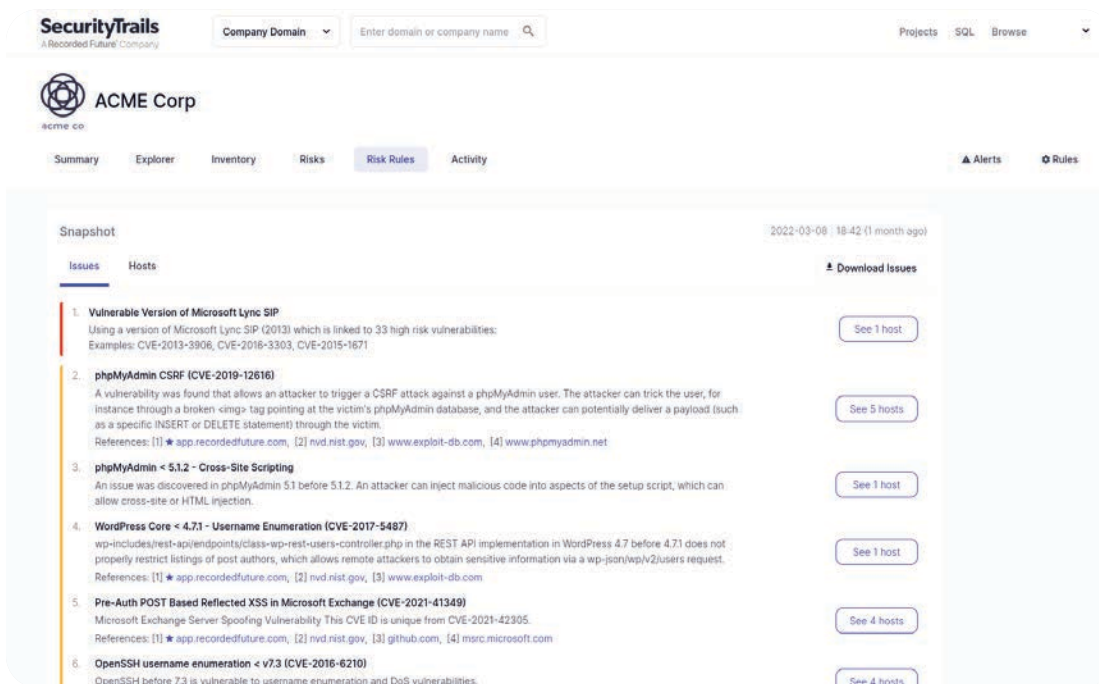

Attack Surface Intelligence provides defenders with a complete understanding of their attack surface via a real-time snapshot, as well as a historical view, of all on-premise and cloud based assets on the internet at any given time. With 10+ years of data and deep context on hostnames, domains, IP blocks, SSL certificates, WHOIS data, DNS data, and more, organizations can more easily manage their attack surface with a single pane of glass, accelerate incident response investigations, supercharge vulnerability scanning, and confidently reduce risk.

BENEFITS

- Discover previously unknown shadow IT and out of policy assets
- Accelerate vulnerability scanning and incident response
- Confidently prioritize assets that may be vulnerable to threats or exploits
- Disrupts adversaries, while minimizing disruption for your business

Features

- Continuous scanning of the internet for attack surface blind spots across domain-related environments and distributed ecosystems
- Broad sourcing and 10+ years of intelligence, including the world's largest archive of past and present DNS history
- Activity Feed for persistent, real-time monitoring of the attack surface landscape
- Transparent context on known threats and vulnerabilities for faster prioritization and response
- Access to a team of world-class attack surface experts for onboarding, training, and ongoing support

Forget static lists and human audits. Attack Surface Intelligence provides complete oversight of external assets and supports risk reduction across the business.

ABOUT RECORDED FUTURE

Recorded Future is the world's largest intelligence company. The Recorded Future Intelligence Platform provides the most complete coverage across adversaries, infrastructure, and targets. By combining persistent and pervasive automated data collection and analytics with human analysis, Recorded Future provides real-time visibility into the vast digital landscape and empowers clients to take proactive action to disrupt adversaries and keep their people, systems, and infrastructure safe. Headquartered in Boston with offices and employees around the world, Recorded Future works with more than 1,300 businesses and government organizations across 60 countries.
